

Rope conveyors from WESSJOHANN have proven themselves for years in a wide variety of industrial and commercial applications:

Application examples

- Aluminium works
- Building material industry
- Chemical industry
- Fertilizer industry
- Color works
- Meat meal industry
- Gypsum factories
- Thermal powerplants
- Lime factories
- Ceramic industry
- Sewage treatment plants
- Feed industry
- Power plants
- Plastic industry
- Food industry
- Waste management companies
- Paper mills
- Sootworks
- Steel works
- Animal carcass utilization
- Washing powder industry
- Cement industry and much more...

WE CONVEY SUSTAINABLY!

WE CONVEY SUSTAINABLY!

Drive station with friction wheel and an integrated clamping device.

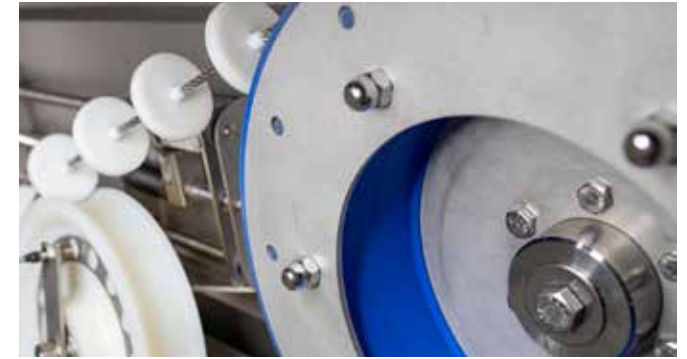

ADVANTAGES & FEATURES

- Based on the proven 60s **Wessjohann** rope conveyor, a 90s rope conveyor system was created that **has been further developed** in many aspects.
- By selecting high-quality, coordinated materials, a new generation of rope conveyors was conceived. The result is impressive.
- A conveyor rope or a conveyor chain can be used without major modifications.
- Housing made of thick-walled stainless-steel.
- Product intake with integrated inspection opening for optimal control.
- Stainless-steel deflection corners with a deflection wheel made of a material combination of stainless-steel and wear-resistant **PUR**.

2K FRICTION WHEEL FOR ROPE AND PIPE CHAIN CONVEYOR

The new **2K-friction wheel** as a drive wheel from **Wessjohann** consists of a stainless-steel-PU combination. This choice of material has resulted in a low-wear, corrosion-resistant and quiet drive system that optimally transfers the power to the conveyor rope or conveyor chain and increases the service life many times over.

**SMOOTH

WEAR-RESISTANT
COMPONENTS.**

2K DEFLECTION WHEEL FOR ROPE AND PIPE CHAIN CONVEYOR

The new **2k-deflection wheel** from **Wessjohann** consists of a stainless-steel inner plate with a stainless-steel hub and a PU-coating that forms the wheel. This material selection creates a low-wear deflection system that significantly increases service life. It features curved spokes that guide the product outwards to enable optimal product flow.
